You say you have a takt time of 8 minutes. Do we take average cycle time for 20 data or do we just take any one of it? How do I show this in my value stream map? You can then analyse this over the course of time to see the differences in time and the range between lowest and highest run rates. Or resources I can tap to help me understand how I could improve upon this? Metrology and gage techniques used to be learned on the job. Feel free to contact me to discuss specifics. Ok, now I could understand.
